

Circulation

The subject site is located between two important arterial traffic routes serving the downtown core; Seymour Street is one way going north, and two blocks to the west is Howe Street which is one way going south. Both are major vehicular and transit exit routes from the downtown core. One street to the north, Nelson Street is one way going east, and a major cross-town feeder to the Granville Street area, Downtown South, Yaletown, Cambie Bridge and beyond to south Vancouver. Smithe Street, two blocks to the north of the site, is one way going west. Davie Street, one block to the south provides two way access to and from the West End. All parking and loading access is currently required to be off the lane shared with Granville Street fronting hotel, and other adjacent retail and entertainment uses. Lane access is two-way from Helmcken or Davie. There are numerous access points to public transit close by.

Site Access

As access to on-site parking is not permitted off of Seymour or Helmcken Streets, the below-grade parking will be accessed from Helmcken to the north and Davie to the south. All loading operations to the site will also be off of the lane.
